*activity*

\*Females 12 & older will have a urine pregnancy test at every visit, including sick visits.

At Pathway Pediatrics, we follow the current AAP (American Academy of Pediatrics) guidelines. Growth & development are checked at each wellness visit. Developmental, psychosocial & chronic disease issues for children and adolescents may require counseling & treatment visits separate from, and in addition to preventative care visits. Puberty/adolescent issues will be discussed at visits beginning at age 12 & visit may include one on one time for the teen and the provider. For more information on specific vaccines, please visit the CDC website at <http://www.cdc.gov/vaccines>.
